Hi Jon.

Just got this from Phyllis but please keep internal to EPA (and Weston) at this point.

Thanks.

Hi LaDonna,

Attached are the two items you requested during our phone call last week. Also, I spoke to Earle about the possibility of going out and collecting a sample from the resident that contacted David Mayerson. Earle also mentioned that one of the wells that they intended to sample in early October was not accessible, but may be now. I have asked Earle to provide a list of wells that were not sampled for various reasons to see if we want to do a more thorough follow up. What do you think of this idea? Let me know if you need anything else and we will call tomorrow morning on West Central. Thanks

*Phyllis*

Please see attached list of wells. I tried to categorize the sampled wells with color for their estimated-known production zone in the units: Qal, Chinle, San Andres-Glorieta, and Dakota SS.

Earle
